

Drip Pipe Fittings

Abbreviation : MPF
Materials: PP/POM

product description

The socket pipe fitting is a commonly used drip irrigation fitting. It is mainly used for the connection of 16, 20, 25 drip irrigation pipes and PE pipes. It is easy to install and can be quickly repaired when pipeline problems occur later.

installation method:

1. Trim one end of the prepared drip irrigation pipe (or PE pipe) evenly.
2. Insert the double barb end of the pipe fitting into the trimmed drip irrigation pipe (or PE pipe) to ensure that all double barbs are submerged in the drip irrigation pipe (or PE pipe).

Precautions

1. The insertion depth of the drip irrigation pipe or PE pipe must exceed the barb depth of the pipe fitting.
2. During construction in winter, because PE pipes are hard and difficult to connect, they can be connected after soaking in warm water.

Products Technical Data Sheet
