

Hang Sprinkler Set

According to the structure of the micro-sprinkler, it can be divided into single-side wheel micro-sprinkler; double-side-wheel micro-sprinkler; refraction micro-sprinkler; rotary micro-sprinkler; atomized micro-sprinkler, etc.

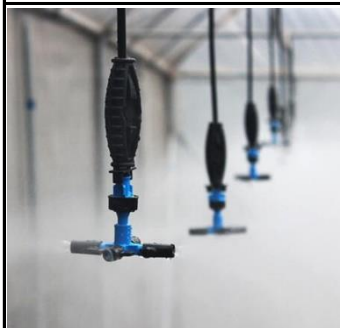

Features:

1. Simple installation, operation and maintenance
2. Good anti-clogging performance and uniform water flow;
3. Yield and quality of significant works;
4. It is suitable for irrigation of agricultural facilities such as large fields and small-area solar greenhouses and greenhouses.

It is suitable for greenhouses, greenhouses for flowers, irrigated vegetables, and places where crops do not require much atomization of water droplets.

Precautions:

When the anti-drip device is installed in the inverted device, it can effectively prevent the dripping of the water in the pipeline from hurting the seedlings after the spray is stopped.
